## Shunts Class 0.5

**60 mV  
100 mV  
150 mV  
300 mV**

WEIGEL

## Application

Shunts provide an accurate DC millivolt signal to drive ammeter indicators, overload protection and control devices, especially for higher amperage. They supply a voltage drop proportional to the DC current which is measured and indicated by a moving-coil meter with the dial calibrated in amps.

In accordance with DIN standard 43 703 shunts are available from 1 A up to 15,000 A with an accuracy of 0.5%. Standard voltage drop is 60 mV or 150 mV. Intermediate current ratings, other voltage outputs, better accuracy and purpose-built shunts can be supplied.

Shunts are manufactured in three different format versions depending on current ratings.

## **Operating Principle**

The current passing through the shunt produces a proportional voltage drop. A moving coil instrument connected to the shunt measures the voltage drop across the shunt terminals.

Shunts are calibrated in such a way that they produce an accurately defined voltage drop (60 mV, 150 mV or other).

## General Data

format version A	insulating base mounted shunts clamping to DIN mounting rail or wall mounting (up to 25 A / 60, 100, 150 or 300 mV); without insulating base (30 ... 150 A) ↗
format version B	L-profile end blocks
format version C	T-profile end blocks
material	
resistance bars	manganin
end blocks	
format version A	high conductivity brass
format version B	high conductivity brass/solid copper
format version C	solid copper
base material	Lexan, black
format version A	self-extinguishing to UL rating 94 V-0
connections	thread screws
current	please refer to "Dimensions"
voltage	M5x8
mounting	screw mounting (M8 max.) or
format version A	clamping to DIN mounting rail (to DIN EN 60 715)
enclosure code	IP 00
dimensions	please refer to "Dimensions"
weight	please refer to table below
