2019

Explosion-protected electrical equipment

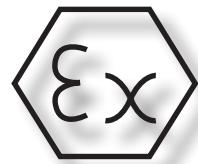

To be sure to be safe.

## The value of experience

The peculiarity of the Cortem Technology Group is the experience gained in more than 40 years of activity in the Ex field which results not only in the supply of simple Ex-products, but also in engineered and customized solutions.

It was established in 1968 with the acronym "Cor.tem" Costruzioni, Rappresentanze tecniche elettromeccaniche and immediately it specialized in the production of electrical equipment for areas with danger of explosion and fire.

During the '70s Italy and ENI agree to increase their

specialization in the processing of crude oil into finished products.

In the same years, Elfit company was founded in order to carry out some strategic processes internal to the company and to provide the market with complementary lighting products, such as connectors, cable glands, junction boxes.

Since the '90s, thanks to the acquisition of Fondisonzo, company, a competitor in the same market segment, Cortem became soon the technological point of reference for Italian explosion-protected equipment.

# Design, Production and Installation

In addition to the on-going research in order to develop innovative products and the process of complying the products with international standards, great attention is addressed to the engineered and customized solutions. We design and manufacture all products internally, with different security methods such as 'Ex d', 'Ex e' increased safety and 'Ex de' mixed, 'Ex n' no sparkling, using alloys and plastics of primary quality.

Considering our customers' needs, our R&D department studies the best solution valuating normative and market price issues, plant and security aspects.

Cortem production range can be summarized as follows:

1. Lighting fixtures for LED technology, fluorescent lamps, halogen lamps, sodium vapor, high pressure mercury vapor, metal halide, mixed light. Obstruction lighting fixtures, rechargeable hand-held lamps for tank inspection. Zone 1, 2, 21, 22.
2. Junction and pulling boxes, enclosures for power and control panels, grounding security systems for tankers. Zone 1, 2, 21, 22.
3. Control station, command and control operators, signals, electrical circuits and/or motive power switches, limit switches available in ten different models depending on the type of actuator used Zone 1, 2, 21, 22.

4. Plugs and Sockets up to 125A with disconnecting interlock switch. Zone 1, 2, 21, 22.

5. Ex-protected cable glands, fittings, flexible tubes for the realization of complete electrical systems.

6. Ex-protected switchgear and panel board according to customers' specification.

All our products are manufactured using only aluminum alloys with low copper content which assure a better and more secure mechanical strength and a longer life cycle. For the production of 'Ex e' enclosures are also used polyester resins and AISI 316 L stainless steel.

90% of our production are placed in the Oil & Gas sector both off-shore and on-shore, but also in chemical, pharmaceutical plants and in all those manufacturing areas where the presence of explosive atmospheres may occur such as grain silos, woodworks and paper mills.

Applications include the use of electricity to control a plant with, for example, electrical distribution panel boards, or to light entire areas of production processes.

We invest every year some of our resources to develop innovative products that meet the market needs in terms of cost savings, security and reliability.

# Internal organization and territorial presence

We have specific internal departments to support technically tenders for the supply of projects worldwide.

The Area Managers and Project Managers look after the various stages of a supply such as the initial documentation for approval by customer, the monthly reports on the order progress, the testing and the readying of the final Vendor data book.

With more than 30 agencies, 90 distributors, 7 partners

and 3 production centers displaced, Cortem provides a local and qualified presence around the world.

For Cortem "displacing" does not mean transferring facilities, resources and know-how in low cost Countries, but replicating a successful model of industrial organization in which environment safety, product quality, compliance with standards, technical and after-sales services are the basics of our corporate mission.

# **Quality, safety for people and environment**

The recognized quality of our products and of our automated control manufacturing systems is one of the principles guiding Cortem Group activities in order to ensure people safety on plants and environment protection.

There's an internal control system of all the producti-  
vecycle.

The Quality System conforms to the requirements of  
UNI EN ISO 9001:2008.  
Plant facilities and production procedures meet also the

**Plant facilities and production procedures meet also the**

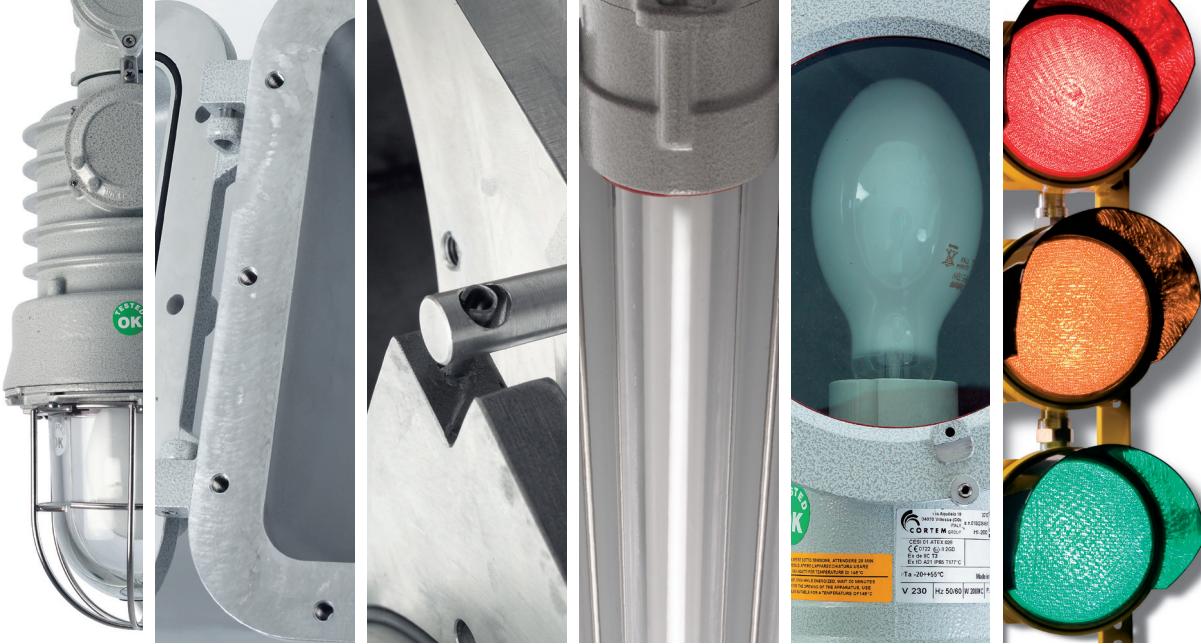

international standard UNI EN ISO 14001:2004 for the Environmental Management System.

All our Ex-protected products are certified in accordance with the European standard ATEX and International regulation IEC Ex. Furthermore, it's ongoing their regulatory compliance to GOST TR CU standards for the Customs Union GOST TR CU.

Respecting these strict international construction rules, guarantees the safety of people and environment.

## "No Fake" Project

During 2012, Cortem has started the project "No Fake". The guarantee of origin against the falsification of products provides the application of an adhesive sticker with a security hologram of a diameter of 2 cm.

The text "TESTED" and the alphanumeric code guarantee the authenticity of the product. Customers can verify the correctness of the alphanumeric code directly on Cortem web site [www.cortemgroup.com](http://www.cortemgroup.com).

# Corporate Identity

---

We encourage and help the people enterprise within the value of meritocracy assessing the individual capacity.

We are constantly focused on carrying out an excellent product which meets market requirements allowing the Company to grow up.

The Pay Off "to be sure to be safe" represents our pride and passion for what we design and manufacture.

*Alessandro Rossi*, President

# A guide to lighting and signalling catalogue

This catalog, dedicated to lighting and signalling, is organized in order to facilitate the search of products and all the related technical and commercial information.

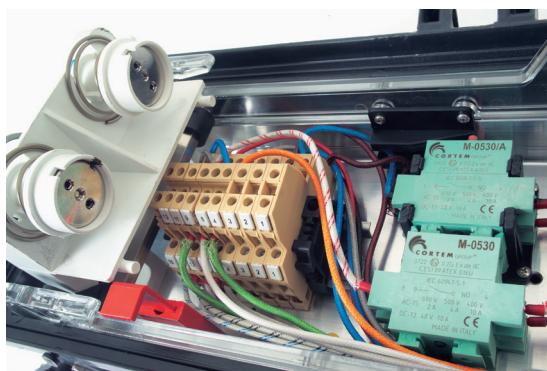

It's divided into two chapters: one chapter dedicated to lighting and one chapter focused on signalling. The catalog shows a colored thumb index which group together products by the type of protection 'Ex d', 'Ex de', 'Ex e', 'Ex i' and 'Ex n'.

On the first page of each product, you will find the series, an image of the product and some structural and functional features.

On the next page, a more detailed description summarizes the main features and a sequence of icons help you to visualize the main application sectors.

A very important part lists the certification data: classification, zones of installation, marking, certificates available, compliance with standards, temperature and degree of protection.

In the next pages you can read: the mechanical and electrical properties, the selection table with the list of available models, the dimensional drawings, a table dedicated to accessories available upon request and spare parts and, finally, the photometric diagram.

## How to order

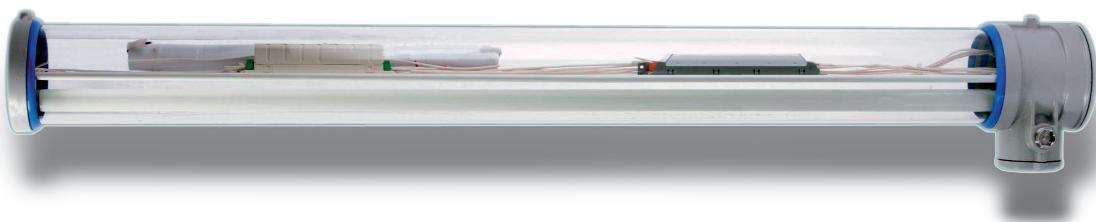

To order a product without getting lost among the many codes which identify a lighting fixture and all its accessories, in every section you'll find a red box.

When ordering you must always indicate:

- the type of lighting fixture, for example:

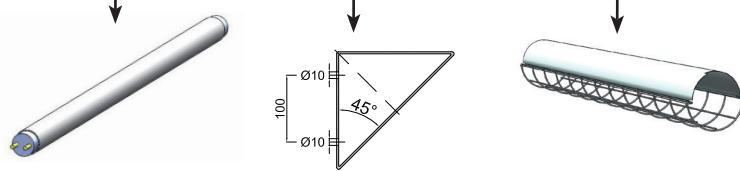

FLFE-236  
Series      Size

- codes of accessories upon request with which you want complete the product: the bulb, the cable gland, the type of reflector, the protection guard etc. .... that you will find in the "Accessories and spare parts available on request" section.

### DON'T FORGET TO ORDER THE ACCESSORIES

**Exemple: Type of lighting fixture FLFE-236 + Fluorescent tubes LAMPL36W21 + Installation bracket G-258 + Guard with external protection G36-0529 + other...**

# Accessories, spare parts and maintenance operation

In the section "Accessories and spare parts available on request" are summarized the accessories available in order to complete the product and the spare parts for maintenance operations.

The icons in the "Key" indicate whether the item is an accessory, a spare part or both.

Please note that the maintenance operations of explosion-protected products must be carried out using only original parts of the manufacturer.

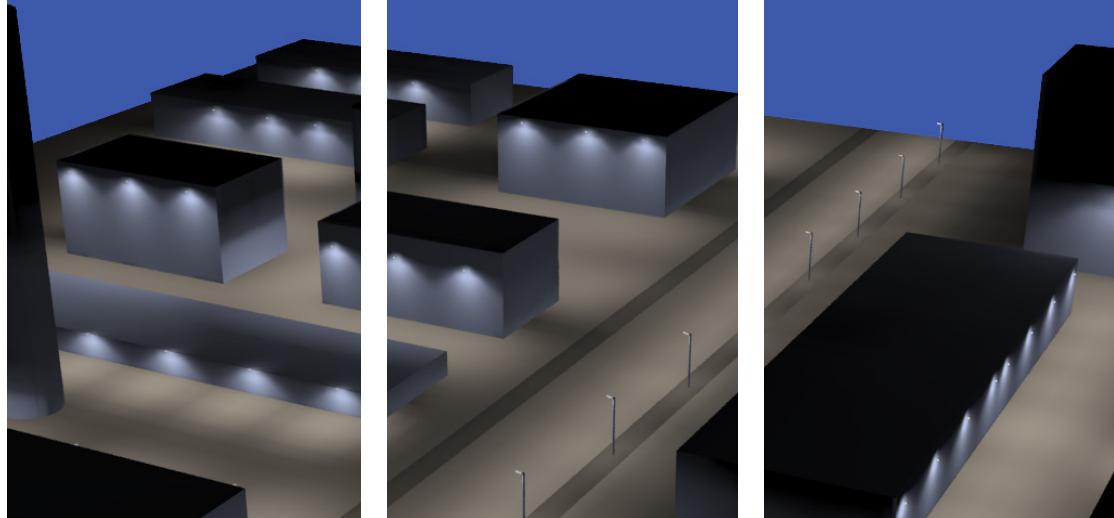

In case of use of non-original spare parts, the product certificate is no longer valid and it's possible that the ex-protection is no longer guaranteed.

One of the most important causes of risk of explosion, could be the wrong maintenance operations of ex-protected equipment.

The safety of equipment is granted over time by con-

tinuous application of maintenance plans, involving a series of activities that we list here below, and, most of all, by efficient personnel training:

- Familiarizing with the standards regulating the identification and classification of hazardous areas.
- Familiarizing with the standards regulating the protection methods of electrical equipment installed in the plant.
- Familiarizing with the applied protection methods.
- Familiarizing with the particular project stages as far as protection methods concerns.
- Recognizing the protection methods by marking labels.
- Identifying the components and spare parts used by the manufacturer.
- Familiarizing with the electrical and mechanical maintenance methods.
- Familiarizing with the tests prescribed for repaired electrical equipment.

# Photometric files for lighting projects

Cortem Group provides, upon request, photometric files of its lighting equipment for lighting designs.

These files can be used with LTESTAR lighting design software for internal and external able to make simple and effective the job of lighting designers.

Entering the photometric files of the selected models along with architectural data, you obtain graphs, curves, installation diagrams and a virtual image with the real lighting effect.

The software, available in several languages , can be free downloaded from [www.oxytech.it](http://www.oxytech.it) with the manual of use.

For more information, contact Cortem Sales Offices.

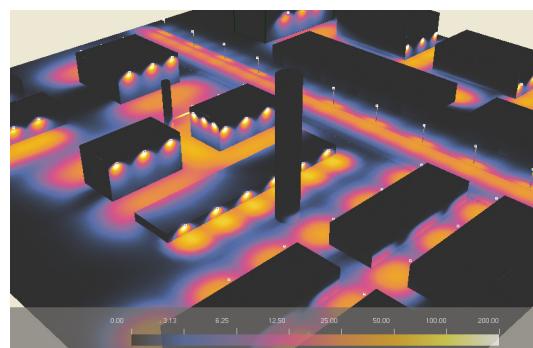

## A little more...

For more information about the Ex-protected world and on the basis of lighting engineering please download from [www.cortemgroup.com](http://www.cortemgroup.com) web site, Product section, Catalogs the following reference materials:

- Guide to the EX world - How to use the electrical equipment in areas with risk of explosion
- Basis of lighting engineering.

# EV

- Optimal performance at high (+60°C) and low temperatures (-50°C)
- Easy to install, low maintenance costs
- Zone 1, 2, 21, 22

# EV series Lighting fixtures for traditional and LED lamps

EV series lighting fixtures have been specially designed for use in the petrochemical and oil refining industries as they combine beauty and functionality along with high performance and simplicity in complete compliance with the technological requirements of the "Ex sector". The low copper content aluminium alloy, shockproof borosilicate glass and electro-polished stainless steel components make these lighting fixtures ideal for use in environments with corrosive atmospheric agents, salts and industrial pollution. Mechanical characteristics such as ceramic lamp holders with high heat resistance and insulating properties and acid-proof neoprene gaskets guarantee a long working life with little maintenance. Scheduled maintenance work involves simply cleaning the glass that, thanks to its IP66 protection, can be safely cleaned with a wet cloth. As specified in the appropriate installation standard (EN/IEC 60079-14), the entry to the fixture must be only through an Ex "barrier" cable gland (sealed) or, in the case of a conduit system, with an EYS, EZS sealing fittings.

<b>Application sectors</b>								
	Oil refineries	Chemical and petrochemical plants	Onshore plants	Offshore plants	Low temperatures	Fuel depots	Oil loading/unloading jetties	100% Cortem product

# EV series Lighting fixtures for traditional and LED lamps

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Globe:</b>	Shock and temperature resistant borosilicate glass with aluminium shade ring
<b>Gaskets:</b>	Silicone acid/hydrocarbon resistant
<b>Guard:</b>	Electro-polished stainless steel. Can also be supplied on request without a guard as the lighting fixture has passed the glass breakage test (4 Joule EN60079-0 / IEC60079-0)
<b>Mounting:</b>	See "EV series dimensional drawings"
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	3/4" NPT threads
<b>Coating:</b>	Polyester coating Ral 7035 (Light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E27 or E40 ceramic
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Direct connection to lamp holder L, N. Section 4mm <sup>2</sup>

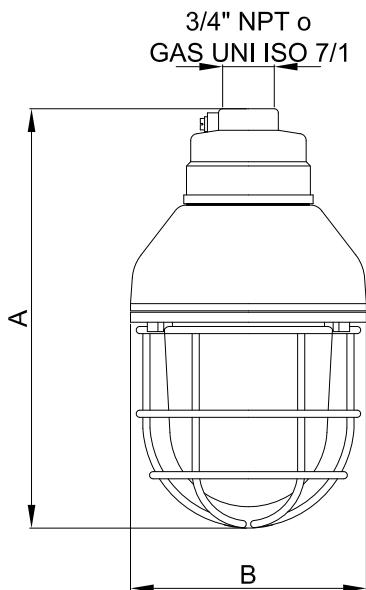

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

- LED lamps
- External reflector
- Cable gland: FGAB2NBK for armoured cable or FB2NBK for non-armoured cable
- Warning signs: G-0513
- GAS UNI ISO 7/1 thread
- Different rated voltages

EW

- Suitable for installation with ambient temperature from -50°C to +60°C
- Suitable for discharge lamps of up to 150W
- Zones 1, 2, 21, 22

Cooling fins

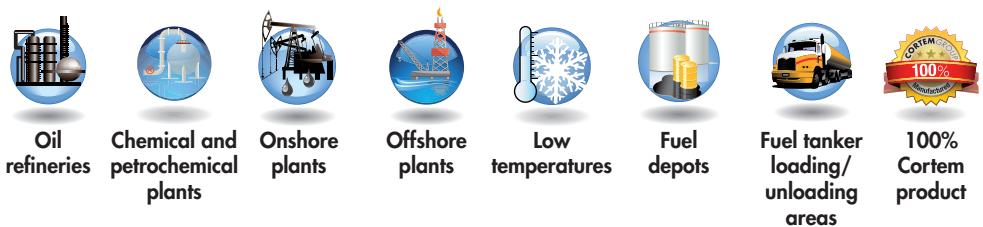

## EW series Lighting fixtures for discharge lamps up to 150W

EW series of lighting fixtures for discharge lamps has been designed in compliance with ATEX Directive 2014/34/UE for all those areas defined as "hazardous" due to the presence of potentially explosive flammable gases and dusts where good local lighting is a necessity. The low copper content aluminium alloy lamp body has cooling fins for better heat dissipation that ensures a longer lifespan and more effective electrical consumption. The borosilicate glass globe has excellent thermal and mechanical properties. For this reason, the fixture can also be installed without a protective guard. The resistance of this lighting fixture to high (+60°C) and low (-50°C) temperatures makes it ideal for use in any type of climatic condition and it can be used in plants worldwide.

As EW series was designed with the "Ex d" protection method, the "entry" to the fixture, as specified in the installation standard (EN/IEC 60079-14), must be only through an Ex "barrier" cable gland (sealed) or, in the case of a conduit system, with an EYS, EZS sealing fittings.

# EW series Lighting fixtures for discharge lamps up to 150W

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Globe:</b>	Shock and temperature resistant borosilicate glass with aluminium shade ring
<b>Gaskets:</b>	Silicone acid/hydrocarbon resistant
<b>Guard:</b>	Electro-polished stainless steel. Can also be supplied on request without a guard as the lighting fixture has passed the glass breakage test (4 Joule EN60079-0 / IEC60079-0)
<b>Mounting:</b>	See "EW series dimensional drawings"
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	3/4" NPT threads. See "EW series dimensional drawings"
<b>Coating:</b>	Polyester coating Ral 7035 (Light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E27 or E40 ceramic
<b>Ballast:</b>	Electromechanical
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50 Hz
<b>Connection:</b>	Direct connection to the terminal box L, N, Pe. Section 4mm <sup>2</sup>
<b>Power factor:</b>	0.96
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

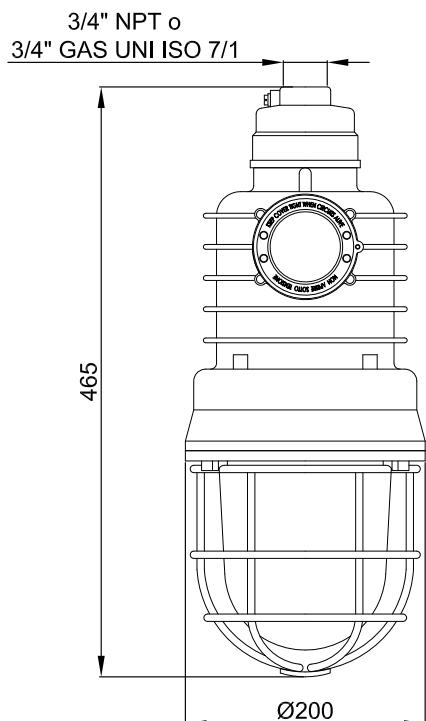

- Discharge lamp
- Different rated voltages
- Rated frequency: 60 Hz at 230 V (code EW-5070N1/**60**)
- External reflector
- Cable gland: FGAB2NBK for armoured cable or FB2NBK for non-armoured cable
- GAS UNI ISO 7/1 thread

# EW

- Suitable for installation with ambient temperatures from -50°C to +60°C
- Suitable for discharge lamps up to 400W
- Zones 1, 2, 21, 22

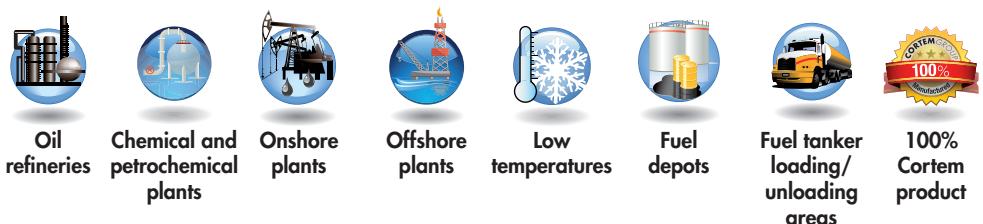

# EWA series Lighting fixtures for discharge lamps up to 400W

EWA series of lighting fixtures for discharge lamps has been designed in compliance with ATEX Directive 2014/34/UE for all those areas defined as "hazardous" due to the presence of potentially explosive flammable gases and dusts where good local lighting is a necessity. The body of the lamp is made of low copper content aluminium alloy, the globe is made of borosilicate glass and has excellent thermal and mechanical properties. For this reason, the fixture can also be installed without a protective guard. The resistance of this lighting fixture to high (+60°C) and low (-50°C) temperatures makes it ideal for use in any type of climatic condition and it can be used in plants worldwide.

As EWA series was designed with the "Ex d" protection method the "entry" to the fixture, as specified in the installation standard (EN/IEC 60079-14), must be only through an Ex "barrier" cable gland (sealed) or, in the case of a conduit system, with an EYS, EZS sealing fittings.

- Zone 1, 2, 21, 22
- Excellent "CX" coefficient
- Easy re-lamping
- Designed to last over time

Simplified maintenance

## FLF series Lighting fixtures for fluorescent tubes

FLF series lighting fixtures have two low copper content aluminium heads fitted with G13 lamp holder, a tempered borosilicate glass tube that is resistant to changes in heat and a white painted aluminium reflector. Unlike the FLFE series, as specified in the appropriate installation standard (EN/IEC 60079-14), entry to the fixture must be through an Ex "barrier" cable gland (sealed) or, in the case of a conduit system, with an EYS, EZS series sealing fittings. The round cross section of the lamp provides a better "Cx" coefficient with less resistance to the wind and less accumulation of dust. For this reason, these units are recommended for use in hazardous places where climatic and environmental conditions are severe and as they require less maintenance. FLF series has been designed to facilitate and speed up maintenance operations. As the electrical components are housed on a frame with guides, re-lamping is quick and efficient. The fact that the fixture is fitted with a glass tube as opposed to a plastic material, makes it more effective and with a longer lifespan.

# FLF series Lighting fixtures for fluorescent tubes

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy heads
<b>External tube:</b>	Shock and high temperature resistant borosilicate glass
<b>Gaskets:</b>	Acid/hydrocarbon resistant NBR on cover
<b>Inner frame:</b>	White painted aluminium that acts as reflector
<b>Bolts and screws:</b>	Stainless steel
<b>Cap chain:</b>	Stainless steel
<b>Mounting:</b>	Fixture pre-drilled with 2 x M8 holes
<b>Entries:</b>	2 x 3/4" threaded NPT. Fixture set with 1 x PLG2N plug
<b>Coating:</b>	Epoxy coating Ral 7035 (Light grey)
<b>Corrosion Resistance :</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holders:</b>	Bi-pin G13
<b>Ballast:</b>	Single channel electronic
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Direct to internal jumper connections for input/output L, N, Pe section 4 mm <sup>2</sup>
<b>Power factor:</b>	0.98
<b>Emergency unit:</b>	Electronic inverter 110/230V, 50/60Hz, 18...58 W. Ni/Cd batteries, 4 Ah or 7 Ah, 6 V, battery charging monitored by high luminosity red LED (estimated LED lifespan 50,000 hours)
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures
<b>Safety:</b>	Emergency safety switch fitted inside lighting fixture

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

2 pin Ø26 fluorescent tubes model T8

Installation mounting brackets

Stainless steel or galvanized steel guard with external aluminium protection

External aluminium protection recommended for outdoor installations

Re-lamping bracket for use on in-line lighting fixtures

Cable gland: FGAB2NBK for armoured cable or FB2NBK for non-armoured cable

Rated voltage: 277 V with double channel electronic ballast (code FLF-236EF4/**277**)  
110/240 V with double channel electronic ballast (code FLF-236EF4**S**)

GAS UNI ISO 7/1 thread

Can also be supplied in single tube normal operation version: FLF-118 / FLF-136 / FLF-158

Rated voltage: 24 Vdc only for normal operation (Code FLF-118/**24**)

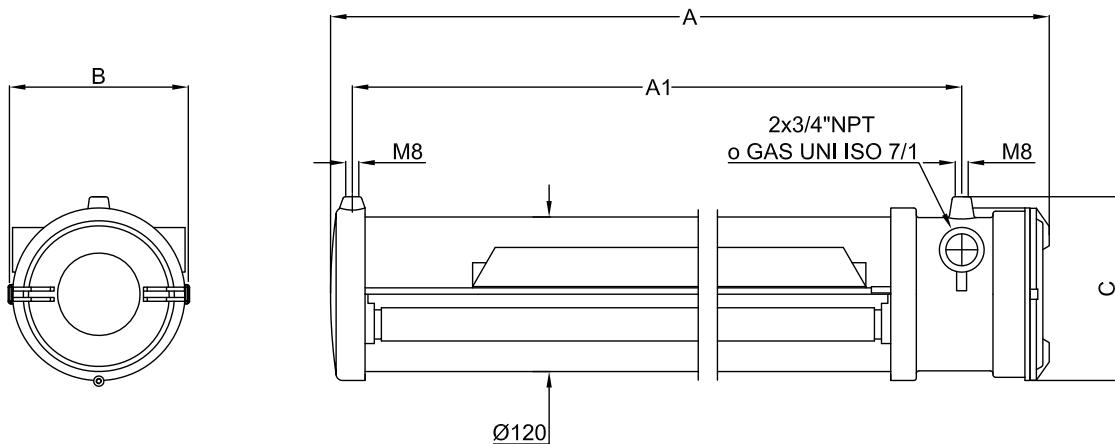

Execution for compact fluorescent tubes 4 pins only for normal operation (Code FLF-136**C** e FLF-236**C**)

Cable entry: 2 x ISO M20 holes. Lighting fixture with 1 model PLG1IB plugs (Code FLF-118EF4/**20**)

# EVFD

- Constant lighting performance
- Long range light diffusion

# EVFD series Lighting fixtures for fluorescent tubes

As their high mechanical resistance, EVFD fluorescent lighting fixtures are recommended for use in all those hazardous areas where the atmosphere is constantly contaminated with fumes, gases and dusts. These units have been designed to provide the even distribution of light without taking up the limited vertical space available. The specially curved reflector and the transparency of the tempered glass tube combine to allow light to diffuse over a wide range and provide more pleasant, less tiring working conditions. All the electrical components are housed in an aluminium "enclosure" that can be easily removed from the fixture for maintenance work. Simply cleaning the glass tube ensures constant excellent illumination over time. As specified in the appropriate installation standard (EN/IEC 60079-14), the only "entry" to the fixture must be through an Ex "barrier" cable gland (sealed) or, in the case of a conduit system, with an EYS, EZS series sealing fitting. EVFD series lighting fixtures come in single or twin lamp versions. The twin lamp versions and connecting kits are only supplied following a specific request from the customer.

- Zones 1, 2, 21, 22
- Integrated electronic ballast
- Power supply 24 V DC
- Compact 24/36 W fluorescent tube
- Degree of protection IP66

# FHL series Portable inspection lamp

FHL series portable inspection lamps for compact 24/36 Watt fluorescent tubes have been specifically designed for carrying out inspection and maintenance work in all areas that are potentially explosive due to the presence of gases and dusts such as in the petrochemical industry, off-shore installations, tank control and processing areas. Thanks to their robust construction, they are easily handled and have a high degree of protection and optimal performance. They are also used in the naval sector for inspecting engine rooms and in the farming industry for checking the inside of silos. In general, these lamps are ideal for any application calling for a reliable source of light. Thanks also to the accessories which these lamps are fitted, they can be used in a wide variety of ways furthermore, thanks to the energy saving Philips master PL fluorescent tubes, the FHL series also provides an excellent colour rendering index in any position and operating temperature.

ORIGINAL PRODUCT

## MECHANICAL FEATURES

**Handle and heads:**

Low copper content aluminium alloy

**External tube:**

Polycarbonate with excellent transparency and brilliance characteristics (in the visible light field with wavelengths of between 400 and 700µm, the uniform transmission is of about 89%). Exceptional shock and UV resistance, flame retardant.

**Seal:**

Silicone resin between the aluminium heads and the polycarbonate tube

**Guard:**

Electro-polished 316L stainless steel.

**Gaskets:**

Acid, hydrocarbon and high temperature resistant silicone

**Bolts and screws:**

Stainless steel

**Hook:**

Stainless steel

**Entries:**

1 x 1/2" NPT entry. Lighting fixture complete with NAV1NB cable gland for non-armoured cable

**Coating:**

Polyester coating Ral 7035 (Light grey)

**Corrosion Resistance:**

The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

**Lamp holder:**

2G11 (4-pins)

**Ballast:**

Electronic, installed in the handle

**Rated voltage:**

24 Vdc

**Connection:**
Direct to the connectors fixed on the electronic board L, N, Pe max section 2.5 mm<sup>2</sup>
**Wiring:**

Silicone rubber cables with glass braid protection against high temperatures

**RLFE**

- Fast, easy installation
  - Suitable for discharge lamps of up to 400W
  - Robust and safe over time
  - Zones 1, 2, 21, 22

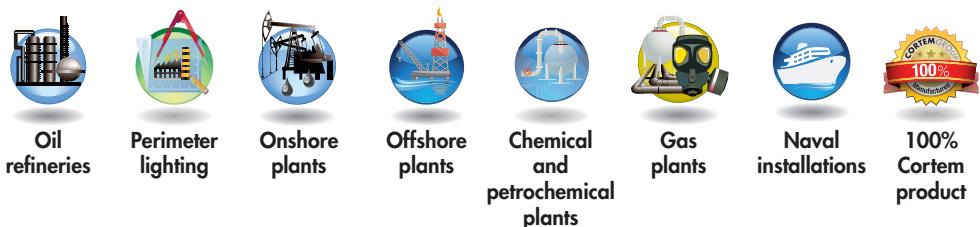

# RLFE series Lighting fixtures for discharge lamps up to 400W

Ex de

RLFE series lighting fixtures for discharge lamps are ideal for lighting large areas specifically in the chemical, on and off shore petrochemical industries. They are certified for use in Zones 1, 2, 21, 22 and comply with the 2014/34/UE directive. The body of the lighting fixture is made from low copper content aluminium alloy, the globe is made of borosilicate glass and has excellent thermal and mechanical properties. For this reason, the fixture can also be installed without a protective guard as specified in the relevant standards. In the RLFE series, the lamp and lamp holder are separated by a "chamber" housing the ballast and igniter that in turn are separated by a "Ex e" terminal box that is used to connect the lighting fixture to the power supply through a cable gland with an Ex (non barrier) seal as specified in EN/IEC 60079-14. The ease of access to the different "chambers" housing the electrical components means lower installation and maintenance costs and less wear and tear over time means a longer lifespan for the lamp.

# EVE series Lighting fixtures for traditional and LED lamps

Ex de

EVE series lighting fixtures have been specially designed for use in the petrochemical and oil refining industries as they combine beauty and functionality along with high performance and simplicity in complete compliance with the technological requirements of the "Ex sector". The low copper content aluminium alloy, shockproof borosilicate glass and electro-polished stainless steel components make these lighting fixtures ideal for use in environments with corrosive atmospheric agents, salts and industrial pollution. Mechanical characteristics such as ceramic lamp holders with high heat resistance and insulating properties and acid-proof silicone gaskets guarantee a long working life with little maintenance. Scheduled maintenance work involves simply cleaning the glass that, thanks to its IP66 protection, can be safely cleaned with a wet cloth. Electrical connection is made via a terminal box in a "Ex e" compartment that allows the entry to the lighting fixture through an "Ex" O-ring (non barrier) cable gland as specified in the installation specification standards (EN/IEC 60079-14).

# EWE

- Suitable for installation with ambient temperature from -50°C to +60°C
- Suitable for discharge lamps of up to 150W
- Suitable for loop-in/loop-out connections
- Zones 1, 2, 21, 22

# EWE series Lighting fixtures for discharge lamps of up to 150W

Ex de

EWE series of lighting fixtures for discharge lamps has been designed in compliance with ATEX Directive 2014/34/UE for all those areas defined as "hazardous" due to the presence of potentially explosive flammable gases and dusts where good local lighting is a necessity. The low copper content aluminium alloy lamp body has cooling fins for better heat dissipation that ensures a longer lifespan and more effective electrical consumption. The borosilicate glass globe has excellent thermal and mechanical properties. For this reason, the fixture can also be installed without a protective guard. The resistance of this lighting fixture to high (+60°C) and low (-50°C) temperatures makes it ideal for use in any type of climatic condition and it can be used in plants worldwide.

In EWE series, the lamp and lamp holder are separated by a "chamber" housing the ballast and igniter. The chamber itself is separated by a "Ex e" terminal box. This box is used to connect the lighting fixture to the power supply through a cable gland with an Ex (non barrier) seal as specified in EN/IEC 60079-14. This easy access to the different "chambers" housing the electrical components helps reducing installation and maintenance costs.

# EWE series Lighting fixtures for discharge lamps up to 150W

Ex de

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Globe:</b>	Shock and temperature resistant borosilicate glass sealed with aluminium shade ring
<b>Gaskets:</b>	Silicone acid/hydrocarbon resistant
<b>Guard:</b>	Electro-polished stainless steel. Can also be supplied on request without a guard as the lighting fixture has passed the glass breakage test (4 Joule EN60079-0 / IEC60079-0)
<b>Mounting:</b>	See "EWE series dimensional drawings"
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	ISO M25 threads
<b>Coating:</b>	Epoxy coating Ral 7035 (Light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E27 or E40 ceramic
<b>Ballast:</b>	Electromechanical
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50 Hz
<b>Connection:</b>	Direct connection to the terminal box L, N, Pe. Section 4mm <sup>2</sup> , suitable for entry/exit
<b>Power factor:</b>	0.96
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

- Discharge lamp
- Different rated voltages
- Rated frequency: 60 Hz at 230 V (code EWE-5070N1/**60**)
- External reflector
- Cable gland: REV2IB for armoured cable or REV2IB for non-armoured cable
- 30° supporting bracket

- Suitable for installation with ambient temperature range from -50°C to +60°C
- Suitable for discharge lamps of up to 400W
- Suitable for loop-in/loop-out connections
- Zones 1, 2, 21, 22

# EWAE series Lighting fixtures for discharge lamps up to 400W

EWAE series of lighting fixtures for discharge lamps has been designed in compliance with ATEX Directive 2014/34/UE for all those areas defined as "hazardous" due to the presence of potentially explosive flammable gases and dusts where good local lighting is a necessity. The body of the lamp is made low copper content aluminium alloy, the globe is made borosilicate glass and has excellent thermal and mechanical properties. For this reason, the fixture can also be installed without a protective guard. The resistance of this lighting fixture to high (+60°C) and low (-50°C) temperatures makes it ideal for use in any type of climatic condition and it can be used in plants worldwide.

In EWAE series, the lamp and lamp holder are separated by a "chamber" housing the ballast and igniter. The chamber itself is separated by a "Ex e" terminal box. This box is used to connect the lighting fixture to the power supply through a cable gland with an Ex (non barrier) seal as specified in EN/IEC 60079-14. This easy access to the different "chambers" housing the electrical components helps installation and maintenance costs.

Ex de

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Globe:</b>	Complete with housing for electrical components
<b>Gaskets:</b>	Shock and high temperature resistant borosilicate glass with aluminium shade ring
<b>Guard:</b>	Silicone acid/hydrocarbon resistant
<b>Mounting:</b>	Electro-polished stainless steel. Can also be supplied on request without a guard as the lighting fixture has passed the glass breakage test (4 Joule EN60079-0 / IEC60079-0)
<b>Bolts and screws:</b>	See "EWAE series dimensional drawings"
<b>Entries:</b>	Stainless steel
<b>Coating:</b>	ISO M25 threads. See "EWAE series dimensional drawings"
<b>Corrosion Resistance:</b>	Polyester coating Ral 7035 (Light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E27 or E40 ceramic
<b>Ballast:</b>	Electromechanical
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50 Hz
<b>Connection:</b>	Direct connection to the terminal box L, N, Pe. Section 4mm <sup>2</sup> , suitable for entry/exit
<b>Power factor:</b>	0.96
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

- Discharge lamp
- External reflector
- Cable gland: REV2IB for armoured cable or REV2IB for non-armoured cable
- Different rated voltages
- Rated frequency: 60Hz at 230 V (code EWAE-5080F5/**60**)
- Bracket for pole mounting
- 30° supporting bracket

- Excellent "CX" coefficient
- Easy re-lamping
- Designed to last over time

# FLFE series Lighting fixtures for fluorescent tubes

Ex de

FLFE series lighting fixtures have two low copper content aluminium heads fitted with G13 lamp holder, a tempered borosilicate glass tube that is resistant to changes in heat and a white painted aluminium reflector. This lighting fixture features an "Ex e" terminal board housing that allows entry to the lamp with a cable gland with an "Ex" seal (normal) as specified in installation standard (EN/IEC 60079.14). The lighting fixture can be supplied in both the normal and emergency version. The round cross section of the lamp provides a better "Cx" coefficient with less resistance to the wind and less accumulation of dust. For this reason, these units are recommended for use in hazardous places where climatic and environmental conditions are severe and as they require less maintenance thanks to a very high ageing index. FLFE series has been designed to facilitate and speed up maintenance operations. As the electrical components are housed on a frame with guides, re-lamping is quick and efficient. The fact that the fixture is fitted with a glass tube as opposed to a plastic material, makes it more effective and with a longer lifespan.

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy heads
<b>External tube:</b>	Shock and high temperature resistant borosilicate glass
<b>Gaskets:</b>	Acid/hydrocarbon resistant NBR on covers
<b>Inner frame:</b>	White painted aluminium that acts as reflector
<b>Bolts and screws:</b>	Stainless steel
<b>Cap chain:</b>	Stainless steel
<b>Mounting:</b>	2 x M8 holes
<b>Entries:</b>	2 x ISO M25 entries. Fixture kit with PLG2IB plug and NAV25IB cable gland
<b>Coating:</b>	Epoxy coating Ral 7035 (Light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holders:</b>	Bi-pin G13
<b>Ballast:</b>	Single channel electronic
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Direct to the terminal board L, N, Pe section 4 mm <sup>2</sup> with jumpers suitable for input/output
<b>Power factor:</b>	0.98
<b>Emergency unit:</b>	Electronic inverter 110/230V, 50/60Hz, 18...58W. Ni/Cd batteries, 4Ah or 7Ah, 6V, battery charging monitored by high luminosity red LED (estimated LED lifespan 50,000 hours)
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures
<b>Safety:</b>	Emergency safety switch fitted inside lighting fixture

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

2 pin Ø26 fluorescent tubes model T8

Installation mounting brackets

Stainless steel or galvanized steel guard with external aluminium protection

External aluminium protection recommended for outdoor installations

Re-lamping bracket for use on in-line lighting fixtures

Rated voltage: 277 V with double channel electronic ballast (code FLFE-236EF4/**277**)

110/240 V with double channel electronic ballast (code FLFE-236EF4**S**)

Can also be supplied in single tube normal operation version: FLFE-118 / FLFE-136 / FLFE-158

Lighting fixture with emergency system and ambient temperature -20°C +55°C with batteries housed in junction box SA141410

Rated voltage: 24 Vdc only for normal operation (codice FLFE-118/**24**)

Execution with LED tubes from 22 W. Rated voltage: 220/240 Vac (Code FLFE-**122L** and FLFE-**222L**). LED tubes included.

Cable entry: 2 x ISO M20 holes. Lighting fixture with 1 model PLG1IB plugs and 1 model NAV20SIB cable glands for non-armoured cable (code FLFE-118EF4/**20**)

*Reinforced locking system*

# EXEL series Lighting fixtures for fluorescent tubes

Ex de

EXEL series increased safety bi-pin fluorescent lighting fixture have a Cortem electronic ballast system that complies with Atex Directive 2014/34/UE. They can be installed in hazardous zones 1, 2, 21 and 22 where a high degree of protection and resistance against corrosion is required such as in chemical and petrochemical plants, off-shore and on-shore plants, processing areas in food industries etc... Fluorescent tubes that reach the end of their working lives are safely monitored and switched off by means of the EOL (End-Of-Life) system. The fact that they have different voltage ratings means they can be used worldwide. Thanks to the double channel ballast design, if one of the tubes stops working, the other continues working independently. As cable entries/exits are fitted to both sides of the fixture body, installation is simple and fast. The transparent cover is clipped into place on both sides of the fixture body with 8 clips on the 18W and 14 on the 36W unit. This ensures excellent protection against dust and water over time despite any degradation caused by ageing. For this very reason, these units are often installed in water purification plants and in areas that are hazardous for ships and ferries. A safety switch is housed inside the fixture that automatically cuts off the power supply when the fixture is opened to replace a fluorescent tube and/or an electrical component. EXEL...E series is fitted with a Ni-Cd battery and electronic inverter for use in emergency operation. The operating time under emergency operation of the single fluorescent tube can be selected depending on requirements and can last from a minimum of 90 minutes to a maximum of 200 minutes. A red LED warning light comes off if the battery needs to be replaced due to a short circuit or if the battery itself is dead.

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Black shock and UV resistant fibreglass reinforced anti-static polyester resin
<b>Diffuser:</b>	Transparent polycarbonate, shock and UV resistant
<b>Protected opening system:</b>	Sliding system operated by a hexagonal-head tool (for safety reasons, the fixture can not be opened without the tool)
<b>Gasket:</b>	Acid/hydrocarbon resistant expanded silicone
<b>Internal reflector:</b>	White painted aluminium
<b>Inner frame:</b>	Extruded aluminium
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	4 x Ø25.5 entries (suitable for ISO M25x1.5 threads). Lighting fixture kit contains 3 model PLG2ILXE7 plugs and 2 model UNI2LXE7DS cable glands for non-armoured cable
<b>Mounting:</b>	Nickel plated brass inserts with 2 x M8 holes

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	Bi-pin G13
<b>Ballast:</b>	Double channel electronic with EOL protection
<b>Rated voltage:</b>	110/240 Vac/dc
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Directly to terminal board L, N, Pe section 4 mm <sup>2</sup> terminal board with jumpers suitable for input/output from either side
<b>Power factor:</b>	0.97
<b>Emergency unit:</b>	Electronic inverter 110V/240V, 50/60Hz. Batteries Ni/Cd, 4 Ah or 7 Ah, 6 V Battery charging monitored by high luminosity red LED (estimated LED lifespan 50,000 hours)
<b>Safety:</b>	Internal "Ex de" safety switch
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

2 pin Ø26 fluorescent tubes model T8

Installation brackets

Grey polyester resin body (code EXEL-118EE**4G**)

Cable entry: 4 x Ø20.5 holes. Lighting fixture kit contains 3 model PLG1ILXE7 plugs and 2 model UNI1LXE7 cable glands for non-armoured cable (code EXEL-118EE4/**20**)

Earthing continuity plates for metal cable glands

## Close up of EXEL series lighting fixtures

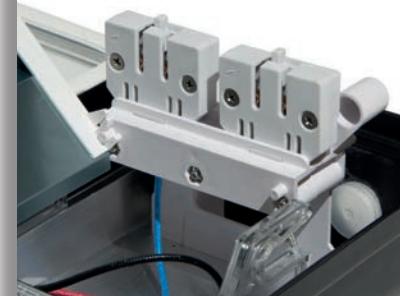

Ex de

Certified lamp holder made at PBT reinforced polyester. G13 bi-pin fitting

Removable internal reflector

Certified NiCd 6V batteries connected in series for emergency lighting. Can be either 4 or 7Ah units housed in polyethylene box

Certified electronic inverter housed in cylindrical aluminium box with one end sealed to allow passage of cables

Certified electronic ballast EBV with the electronic part housed in an insulating enclosure completely incorporated in resin. Manufactured with electronic circuit made to match the requirements regarding the lamp's End Of Life (EOL) protection; provided with protections to prevent over heating of the lamps at end of life

Safety switch

Terminal board section 4mm<sup>2</sup>

# SLEE

# SLEE series Rectangular horizontal floodlights

Ex de

SLEE series floodlights have been specially designed for lighting large indoor and outdoor areas in hazardous zones. Thanks to their versatility and small size, they are the ideal solution for those seeking a balance of quality and value for money. Apart from being suitable for use in environments where there is hydrogen (H<sub>2</sub>) present, they are also certified with a high degree of mechanical protection (IP67) and guarantee a symmetrical and concentrated distribution of light. The symmetrical reflector makes sure that the light is spread symmetrically in all directions to provide uniform lighting. Electrical connection with the floodlight is made via a terminal board in a "Ex e" enclosure that allows the entry to the lighting fixture through a cable gland with an "Ex" O-ring (non barrier) as specified in the installation specification standards (EN/IEC 60079.14). As these units comply with international standards (IEC Ex), they can be installed anywhere in the world. SLEE series floodlights also comply with anti light pollution standards (Regional Law date 27 March 2000 N°17 – Article 6).

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Glass face:</b>	Shock and high temperature resistant tempered glass
<b>Gaskets:</b>	Silicone acid/hydrocarbon resistant
<b>Internal reflector:</b>	Anodised aluminium
<b>Supporting bracket:</b>	Galvanised steel
<b>Mounting:</b>	3 x Ø12 holes
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	2 x ISO M25 entries. Floodlight set with 1 x PLG2IG plug
<b>Coating:</b>	Polyester coating Ral 7035 (Light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E40 ceramic
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50 Hz
<b>Connection:</b>	Direct connection to the terminal board L, N, Pe. Section 4 mm <sup>2</sup> , suitable for input/output
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures
<b>Power factor:</b>	0.96

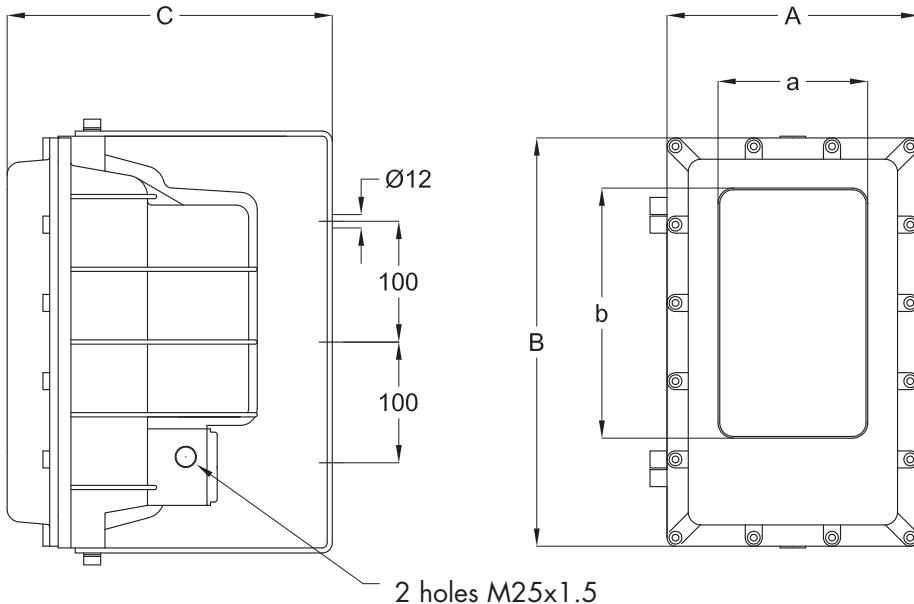

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

- Discharge lamp
- Different rated voltages
- Cable gland: NAV25IB for armoured cable or NEV25IB for non-armoured cable
- Angular orientation system
- Reinforced supporting bracket for mounting on mobile structures
- Frame for mounting floodlight on pole

# SLFE series Rectangular vertical floodlights

Ex de

New generation SLFE series floodlights have been specially designed to provide the symmetrical, powerful distribution of light in all those areas where an intense, concentrated illumination is needed. The symmetrical reflector makes sure that the light is spread symmetrically in all directions to provide uniform lighting. Their rectangular design is both unique and innovative with the benefit of facilitating maintenance work. Lamps replacement is greatly simplified thanks to access through a side panel and there is no need for the glass to be removed. SLFE floodlights have a built in "Ex e" terminal board housing that allows to enter the lighting fixture through a cable gland with a "Ex" O-ring (non barrier) as specified in the installation specification standards (EN/IEC 60079.14). The electrical components (ballast, capacitor, igniter) are thermally separated from the lamp compartment thus ensuring a long and efficient working life. SLFE floodlights can be fitted with lamps of up to a maximum of 600 Watt. SLFE series floodlights also comply with anti light pollution standards (Regional Law date 27 March 2000 N°17 – Article 6).

# VIXLU

- Mechanically very robust
- Extremely lightweight
- Fast, safe and easy fluorescent tube change
- Anti-light pollution flat glass
- Multi-voltage double channel electronic reactor
- Zones 1, 2, 21, 22

# VIXLU series... Lighting fixtures for fluorescent tubes stainless steel/glass series

Increased safety lighting fixtures VIXLU for series bi-pin fluorescent tubes feature an IP66 fixture with an AISI 304 stainless steel (AISI 316L on request) body and a tempered shock- and high temperature-resistant glass diffuser. This construction method makes them ideal for applications where greater protection is needed against chemically aggressive substances or where there is an elevated risk of accidental physical damage such as in certain areas of the chemical or pharmaceutical industries. They are also ideal for use in paint booths or even more specifically for use in areas where specialised electronic components are made for the aerospace industry. They are recommended for use in highly corrosive environments and in areas where water and dust are present or where there are severe variations in climate. Fluorescent tubes that reach the end of their working lives are monitored and turned off by the EOL (End of Life) safety system in compliance with EN 60079-7. If one of the two tubes stops working, the double channel multi-voltage electronic ballast allows the other to continue working independently. The lighting fixture is closed with 6 clips for the 18W version and 8 clips for the 36W. The clips keep the protective glass hooked to the body of the lighting fixture, making maintenance easier and speeding up fluorescent tube replacement.

## DIMENSIONAL DRAWINGS

## VIXLU LIGHTING FIXTURE IN DETAIL

### Fixture access

**Speed** - The fixture does not need to be disassembled to access the connection terminal block. Thanks to the removable frame system on which the fluorescent tubes are housed, in fact, you can directly access the inside of the lighting fixture extremely easily, simplifying any operator maintenance activities.

### Opening/closing system

**Protection** - The lighting fixture is closed by 6 clips for the 18W version and 8 clips for the 36W. The clips keep the protective glass hooked to the body of the lighting fixture, making maintenance easier and speeding up fluorescent tube replacement.

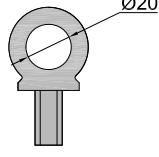

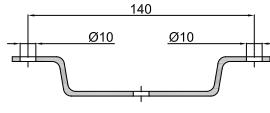

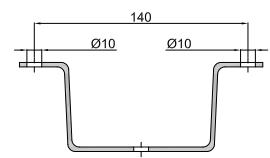

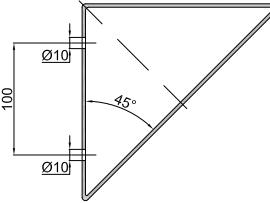

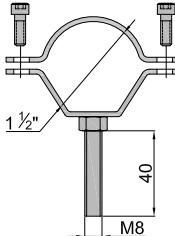

### Materials

**Duration** - The body made entirely in AISI 304 stainless steel ensures high resistance to corrosion and duration over time in very harsh conditions. Also available in AISI 316L stainless steel or AISI 316L painted on request. Shock- and high temperature-resistant tempered glass.

# EWN series Lighting fixtures for discharge lamps in zone 2/22

EWN series lighting fixtures have been specially designed for both indoor and outdoor lighting in industrial processes, especially in the chemical and petrochemical sector, as their mechanical and lighting properties outperform "Ex d" type fixtures. EWN series fixtures have aluminium alloy bodies and borosilicate glass prismatic compartment. They combine structural strength and resistance in chemically aggressive environments with illumination of the process areas where they have to provide light at ground level (horizontal lux) as well as show up potential obstacles (vertical lux). "Ex nR" protection (restricted breathing) is obtained through the use of special wear and tear resistant silicone gaskets that make EWN lighting fixtures category 3 items of equipment. They are therefore suitable for use in hazardous areas classified as Zone 2 (Gases) and Zone 21, 22 (Dusts). These units come in three sizes 60, 80 and 100 with suitable electrical fitting to use discharge lamps ranging in power from 20W to 400W. They feature a large compartment to house electrical components separated from the optical compartment and excellent dissipation of heat generated by the ballast and lamp. The large dispersion area reduces the surface temperature and keeps it below the class T3/T4/T6 limits even when the units are installed in ambient temperatures of up to +60°C. Installation and maintenance are greatly facilitated by the ease of access offered by these lighting fixtures. Opening the compartment housing the electrical components is facilitated by the fact that just one bolt is used to fasten the hinge that makes the compartment an integral part of the whole unit. This allows maintenance staff to work hands-free without having to replace any part of the lighting fixture.

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Globe:</b>	Shock and high temperature resistant borosilicate glass
<b>Protected opening system:</b>	Easy access opening/closing system supplied as standard on the EWN-100 model only
<b>Hinge:</b>	Cast aluminium
<b>Gaskets:</b>	Acid, hydrocarbon and high temperature resistant silicone.
<b>Guard:</b>	Electro-polished stainless steel
<b>Mounting:</b>	Installation and mounting methods EWN series
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	3/4" NPT threads
<b>Coating:</b>	Polyester coating Ral 7035 (light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E27 or E40 ceramic
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50 Hz
<b>Connection:</b>	Direct connection to terminal board L, N, Pe. Section 4 mm <sup>2</sup> , suitable for entry/exit
<b>Power factor:</b>	0.96
<b>Wiring:</b>	Silicone rubber cables with glass braid protection against high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

- Discharge lamp
- External reflector
- Cable gland: NEV2NB for armoured cable or NAV2NB for non-armoured cable
- Suspension wire for optical unit
- Different voltages: multitap ballast 120 V 208 V 240 V 277 V (example code EWNT-100N6**MT**)
- Rated voltage: 480 V 50 Hz (code EWNT-100N6/**480**)
- Rated voltage: 277 V 60 Hz (code EWNT-100N6/**277**)
- Rated voltage: 120 V 60 Hz (code EWNT-100N6/**120**)
- Rated frequency: 60 Hz at 230 V (code EWNT-100N6/**60**)
- GAS UNI ISO 7/1 or ISO M25 threads

Wall mounting with 25° bracket

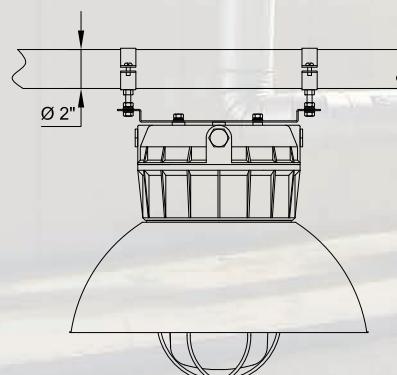

**EWNP**  
pole mounting

For EWNP size 100, a mounting bracket and 3 galvanised steel lugs are supplied for 1 1/2" poles

Example of installation with G-532 bracket and OTER type G-0480/2

## Construction features

**Easy access opening/closing system  
Supplied as standard on EWN-100 model only**

This system was specially designed to offer a easy access to the lamp body during maintenance work while increasing safety. The locking system keeps both hinged parts of the lamp body in position thus providing complete safety, even at heights, as the maintenance worker can use the socket with one hand only while the other can be used to grasp the ladder/raised platform. The advantages are clear in terms of installation times and the prevention of accidents.

Ex n

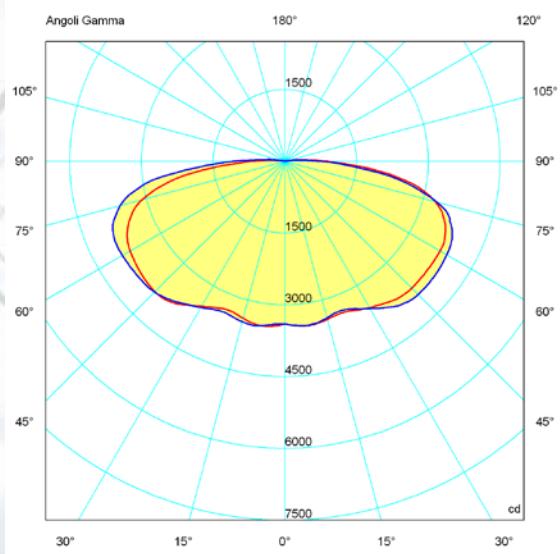

**Suspension wire for optical unit  
- Available on request -**

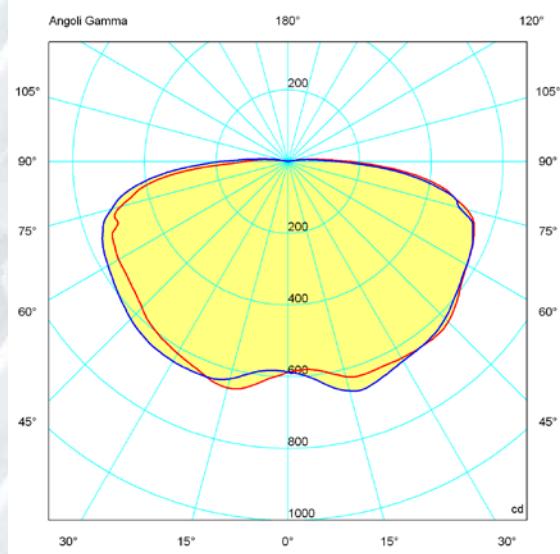

The suspension wire for the optical unit has been specially designed to further increase safety during installation and maintenance work and to decrease the risk of accidents. The wire, that acts as a "third hand" allows the installer to carry out all the necessary procedures without having to support the weight of the globe which remains suspended from the lamp body.

G13 bi-pin lamp holder

# EXEN series Lighting fixtures "industrial series"

EXEN series fluorescent tube lighting fixtures can be installed in hazardous industrial plant units designated as Zone 2 and Zone 22. The materials used in their manufacture makes them ideal for use in all environments where a high degree of protection is needed against corrosion, dust, water and humidity.

Due to their robust mechanical properties, they are installed in both outdoor and indoor industrial environments such as refineries, petrochemical plants, rubber producing plants, paper mills, tunnels, galleries. In a more general sense, they are used in all those production processes where environmental conditions would deteriorate any other material and put the safety of the operating environment at risk. They are fitted with an electronic ballast system (RV series) for G13 bi-pin fluorescent tubes and can be supplied for either standard or emergency illumination. EXEN series lighting fixtures are easy to install and maintain and have a high degree of reliability thanks to the EOL Protected system that allows one fluorescent tube to stop working in safety. EXEN lighting fixtures have been designed to be connected in series thus simplifying installation and doing away with the need for junction boxes.

## MECHANICAL FEATURES

<b>Body:</b>	Black shock and UV resistant fibreglass reinforced anti-static polyester resin
<b>Diffuser:</b>	Transparent polycarbonate, shock and UV resistant
<b>Protected opening system:</b>	Sliding system operated by a hexagonal socket (for safety reasons, the fixture cannot be opened without the tool)
<b>Gasket:</b>	Acid/hydrocarbon resistant expanded silicone
<b>Internal reflector:</b>	White painted aluminium
<b>Inner frame:</b>	Extruded aluminium
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	4 x Ø25.5 entries (suitable for ISO M25 threads). Lighting fixture kit contains 3 x model PLG2ILXE7 plugs and 2 x model UNI2LXE7DS cable glands for non-armoured cable
<b>Mounting:</b>	Nickel plated brass inserts with 2 x M8 holes

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	Bi-pin G13
<b>Ballast:</b>	Electronic single channel
<b>Rated voltage:</b>	220-240 Vac ±10%
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Connected directly to terminal board L N, Pe section 4 mm <sup>2</sup> terminal board with jumpers for input-output
<b>Power factor:</b>	0.97
<b>Emergency unit:</b>	Electronic inverter 110V/240V, 50/60Hz. Batteries Ni/Cd, 4 Ah or 7 Ah, 6 V
<b>Wiring:</b>	Silicone rubber cables with glass braid insulation for high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

2 pin Ø26 fluorescent tubes model T8

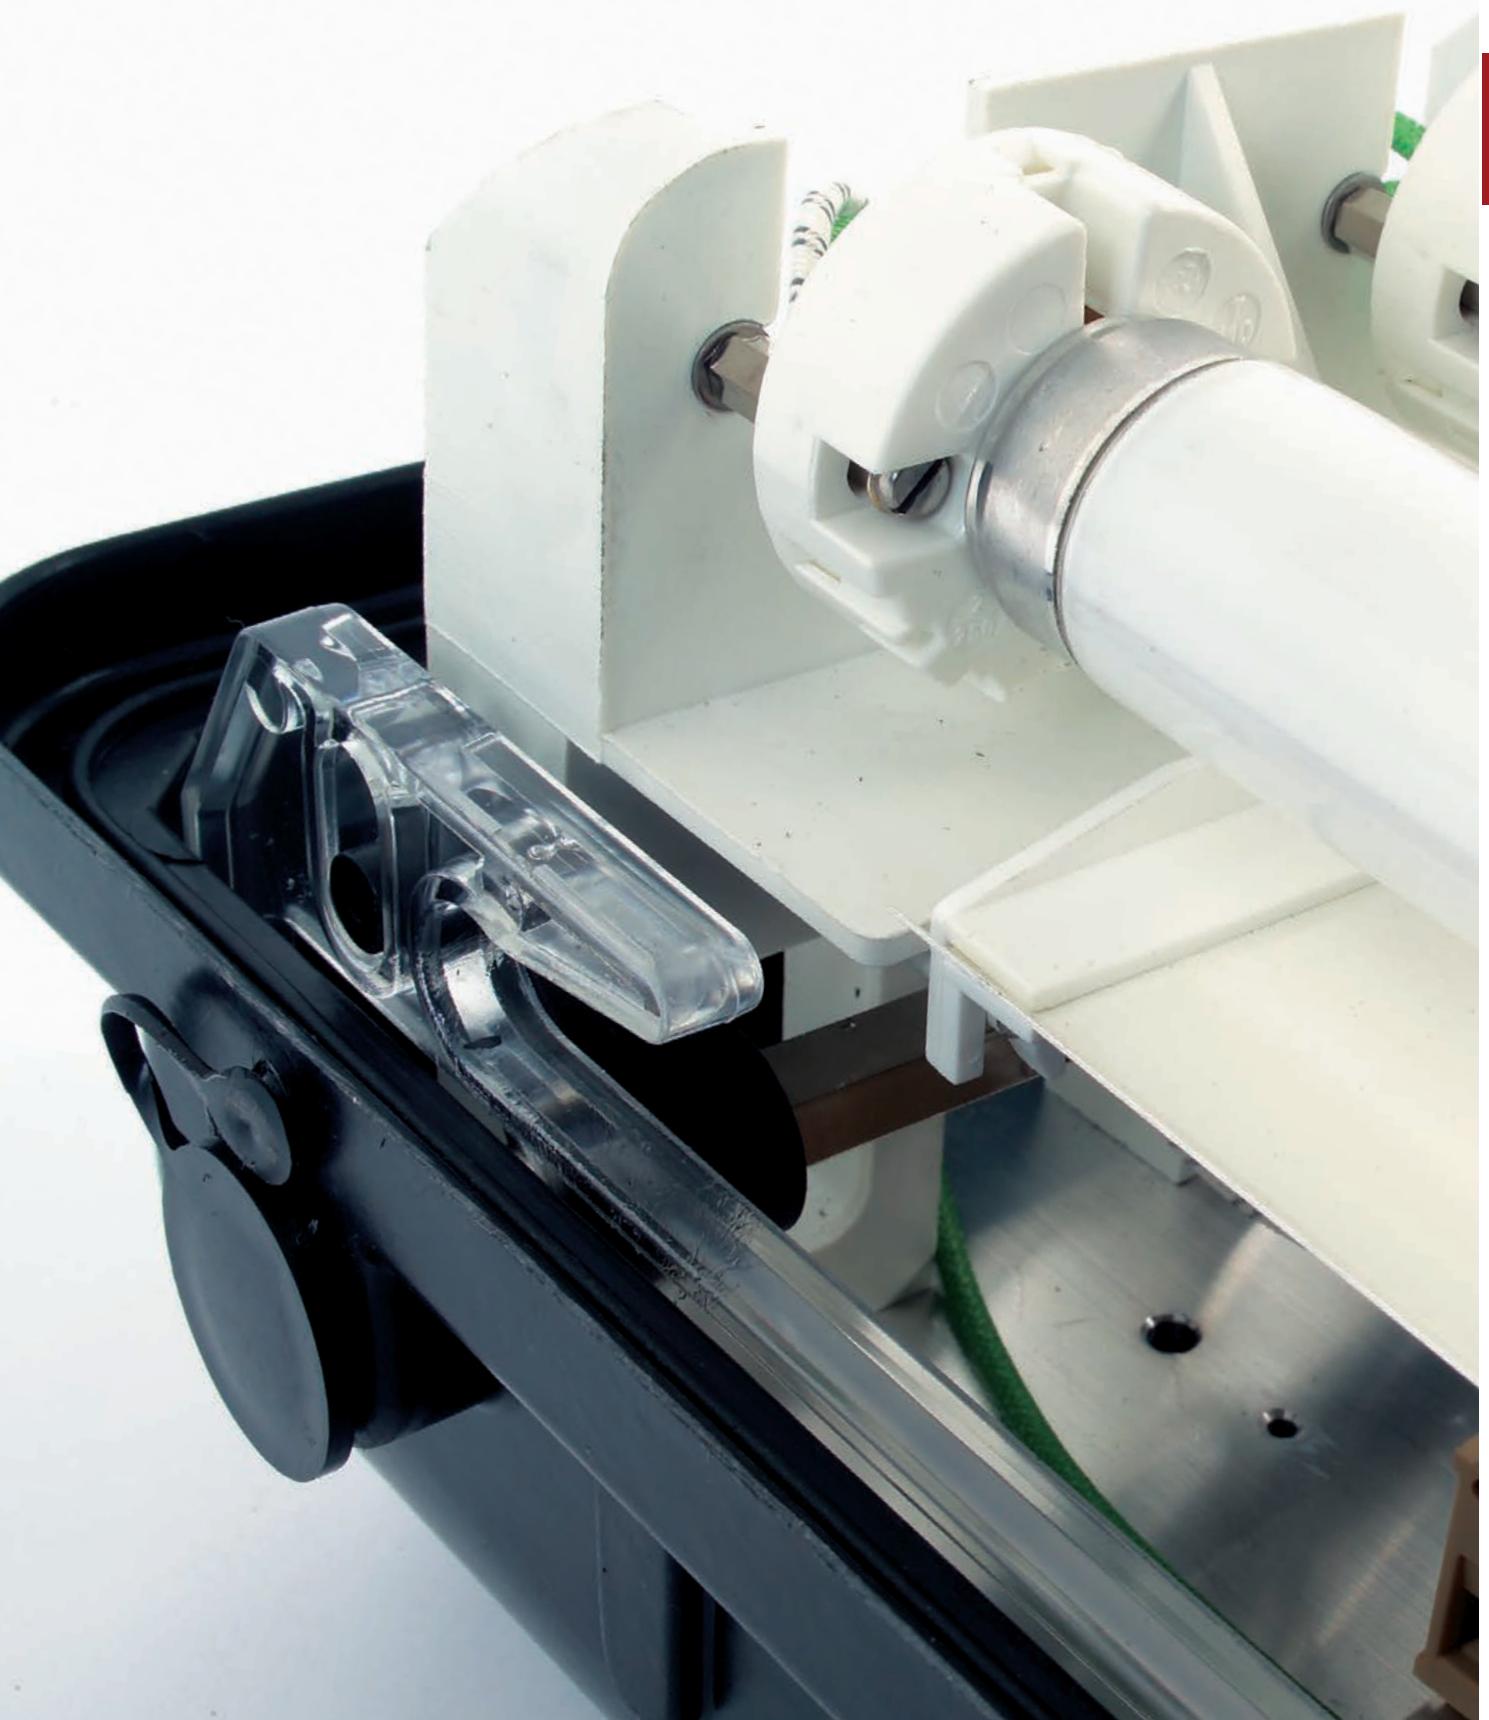

Installation brackets

Grey polyester resin body (code EXEN-118EE4G)

Cable entry: 4 x Ø20.5 holes. Lighting fixture kit contains 3 model PLG1ILXE7 plugs and 2 model UNI1LXE7 cable glands for non-armoured cable (code EXEN-118EE4/20)

Earthing continuity plates for metal cable glands

# EXENC series Lighting fixtures "industrial series"

EXENC series fluorescent tube lighting fixtures can be installed in hazardous industrial plant units designated as Zone 2 and Zone 21-22. A careful research of the materials and the choice of the most performing electrical components give to EXENC, in addition to a considerable duration, greater safety in all environments where a high protection against corrosion, dust, water and humidity is required.

Due to their robust mechanical properties, they can be installed in both outdoor and indoor industrial environments such as refineries, petrochemical plants, rubber producing plants, paper mills, tunnels, galleries. In a more general sense, they are used in all those production processes where environmental conditions would deteriorate any other material and put the safety of the operating environment at risk. They are fitted with an electronic ballast system (RV series) for G13 bi-pin fluorescent tubes and can be supplied for either standard or emergency illumination. EXENC series lighting fixtures are easy to install and have a high degree of reliability thanks to the EOL Protected system that allows one fluorescent tube to stop working in safety. EXENC lighting fixtures have been designed to be connected in series thus simplifying installation and doing away with the need for junction boxes. The replacement of the battery, due to a fault in the emergency circuit or due to its depletion, is indicated by the turning off of the red LED.

# TIGER series Rectangular floodlights

TIGER series floodlights have been manufactured and tested in compliance with European standards for use in hazardous areas classified as Zone 2 due to the presence of gases and as Zone 21, 22 for the presence of dusts. When fitted with a symmetrical internal reflector, they are ideal for lighting large areas and when fitted with an asymmetrical reflector they provide a concentrated beam of light exactly where it is required. Their IP66 degree of protection and excellent performance at high (+60°C) and low (-50°C) temperatures makes TIGER floodlights ideal for all those settings where climatic conditions are extreme. Wiring is greatly facilitated by the use of specially designated terminals that speed up installation and prevent wrong connections. The electrical components are easily accessed (ballast, capacitor, igniter) and are pre-wired to the terminal board this reducing maintenance time and installation costs.

# XLF

- Zones 1, 2, 21, 22
- Obstruction warnings
- Stroboscopic lights
- Single or double fixtures
- Low wind resistance

# XLF series XENON obstruction lighting fixtures

XLF series Xenon obstruction lighting fixtures are ideal for chimneys, towers, smokestacks, bell towers, buildings, cranes, bridges, radio/television masts, cable car and power line pylons, wind turbines, radar and telecommunication antennas and specifically for use in the petrochemical and oil industries. Their small size, light weight, ease of installation and robustness mean that XLF series lights do not deteriorate over time especially with exposure in salty environments. They are also resistant to the wind and the deposit of industrial dusts thanks to the low profile and aerodynamic properties of the body.

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>Globe:</b>	Shock and temperature resistant borosilicate glass sealed with aluminium shade ring
<b>Fresnel lens:</b>	Transparent polycarbonate, shock and UV resistant
<b>Gaskets:</b>	Silicone acid/hydrocarbon resistant
<b>Mounting:</b>	See "XLF-1-2 series dimensional drawings"
<b>Bolts and screws:</b>	Stainless steel
<b>Entries:</b>	4 x 3/4" NPT threaded entries.
<b>Coating:</b>	Polyester coating Ral 7035 (light grey)
<b>Corrosion Resistance:</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	E27 ceramic
<b>Lamp:</b>	Stroboscopic (about 30 flash/min.) 6J or 16J Xenon with electronic module (for further information see "EC SERIES ELECTRONIC MODULE CHARACTERISTICS")
<b>Rated voltage:</b>	24 VAC/DC, 110 VAC, 230 VAC
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Direct to lamp holder L, N, Pe. Max section 4mm <sup>2</sup> The double lighting fixtures (XLF-....2) comes supplied wired and sealed up to the junction box, the connection is made to the terminal board inside the terminal box L, N, Pe. Max section 4mm <sup>2</sup>
<b>Power factor:</b>	0.96
<b>Wiring:</b>	Silicone rubber cables with glass braid protection against high temperatures

## Features of EC series electronic modules.. for XLF

- **EC-05** Double XLF power supply circuit in which a 16J stroboscopic lamp is the main light and the other lamp is a spare.  
Power supply: 230VAC  
Stroboscopic power: 16 J
- **EC-10** Power supply unit for EC... with 230 VAC power supply.  
This unit has both automatic and manual controls as well as a test button.
- **EC-13** Fixed synchroniser that turns on all the stroboscopic lamps wired with a 230 VAC power supply at the same time.

# XLI series fixed obstruction lighting fixture

XLI series fixed obstruction lighting fixture are ideal for chimneys, smokestacks, high buildings, cranes, bridges, radio/television masts, power line pylons, wind turbines, radar and telecommunication antennas and specifically for use in the petrochemical and oil industries.

Their small size, light weight, ease of installation and robustness mean that XLI series fixture do not deteriorate over time especially with exposure in salty environments. They are also resistant to the wind and the deposit of industrial dusts thanks to the low profile and aerodynamic properties of the body.

The use of halogen lamps offers additional benefits in terms of energy savings, lower maintenance costs and reduced environmental impact.

# Features of EC series electronic modules.. for XLI

## GENERAL FEATURES

The Cortem designed control panels consist of aluminium or stainless steel Cortem junction boxes that are either fire-resistant or waterproof. These systems ensure that the units operate correctly as well as improving the reliability of warnings and offering alternative types of warning signals.

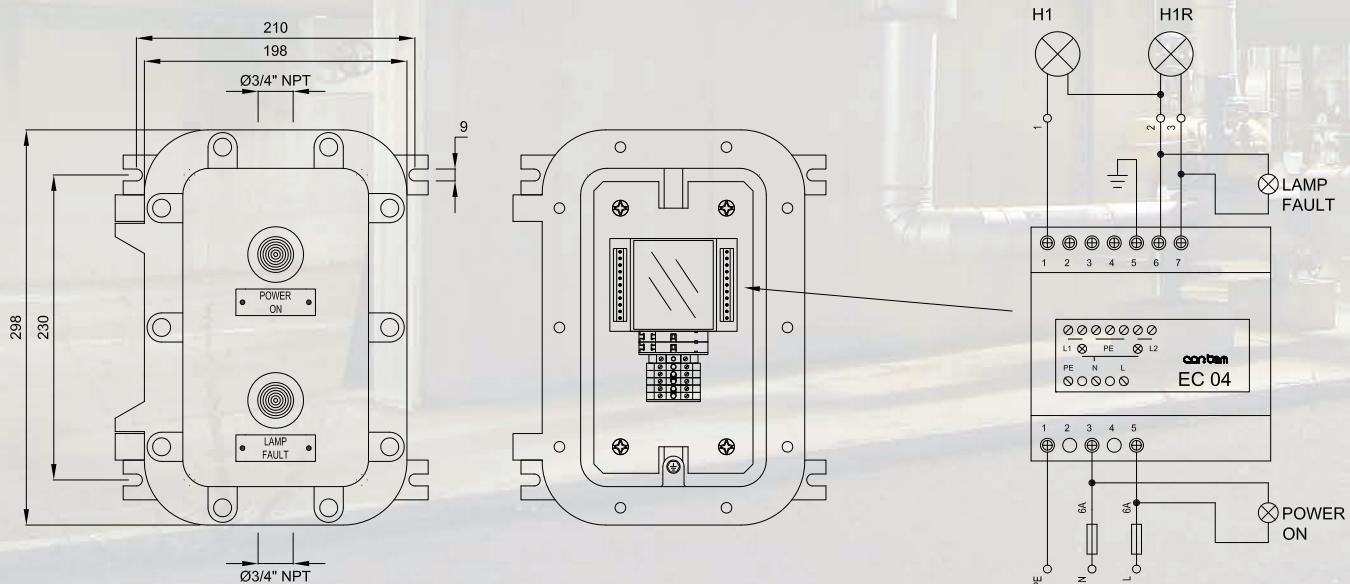

The covers of these panels can be fitted with different devices such as:

- Handle for the internal general magneto-thermal switch.
- Warning lights for faults in the main units.
- Test button for all units and warning lights.
- AUTOMATIC – MANUAL switch that in the "Manual" position switches on all the units without the consent of the "low light" switch module EC-01.

The control panel housings can contain different separated modules that, when wired in series, meet with specific customer requirements. The modules available for obstruction lighting fixtures are as follows (non ICAO - FAA) series XLI:

- **EC-01** Low light switch module. Adjustable from 1 to 150 lux. Operates with an external, integrated photocell
- **EC-03** Double XLI power supply circuit in which a halogen lamp is the main light and the other lamp is a spare. The rate of flash can be adjusted with a potentiometer and fitting of the spare lamp is instantaneous so as not to interrupt the service.  
Power supply: 230 V AC  
Time ON adjustable from: 0.6 - 1.8 sec.  
Time OFF adjustable from: 0.6 - 3.5 sec.
- **EC-04** Double XLI power supply circuit in which a halogen lamp is the main light and the other lamp is a back-up unit.  
Power supply: 230 V AC
- **EC-08** Circuit for powering a single XLI.  
Power supply: 230 V AC  
Time ON adjustable from: 0.4 - 1 sec.  
Time OFF adjustable from: 0.4 - 2.2 sec.
- **EC-10** Power supply unit for EC... with 230 VAC power supply.  
This unit has both automatic and manual controls as well as a test button.
- **EC-12** Turns all the units ON and OFF with a an ON/OFF settings of 0.45 to 2.5 seconds.
- **EC-15** Circuit that powers a double XLI with rate of flash adjusted by potentiometer.  
Power supply: 230 V AC  
Alternate flashing: 0.3 - 3 sec.

**Example of EC-04 module installation in EJB-1 model housing**

# EVF-18X

- Suitable for lighting escape routes and emergency exits
- LED battery monitoring
- For 8W fluorescent tubes

LED battery monitoring

Lamp cover for  
replacing fluorescent tubes

# EVF-18...X series Lighting fixtures for safety warnings

EVF-18...X series emergency lamps comply with ATEX Directive 2014/34/UE. They are certified to be installed in Zones 1, 2, 21 and 22. They also fully comply with Directive EN 60598-1 as regards the section on "emergency lamps". These lamps have been specially designed for high performance emergency lighting in areas with little overhead room especially near emergency exits or escape routes. EVF-18...X 8 Watt fluorescent tubes are fitted with electronic ballast. The red/green LED monitors battery function and warns the user in the event of a failure. In the event of a power failure, the system comes on automatically.

ORIGINAL PRODUCT

## MECHANICAL FEATURES

<b>Body:</b>	Low copper content aluminium alloy
<b>External tube:</b>	Shock and high temperature resistant borosilicate glass
<b>Seal:</b>	Silicone resin between the aluminium heads and the glass tubes
<b>Gaskets:</b>	Acid/hydrocarbon resistant NBR
<b>Bolts and screws:</b>	Stainless steel
<b>Mounting:</b>	2 x galvanised steel brackets with Ø9 slots
<b>Entries:</b>	2 x 3/4" threaded NPT. Lighting fixture complete with 1 x PLG2NA aluminium plug
<b>Coating:</b>	Polyester coating Ral 7035 (Light grey)
<b>Corrosion Resistance :</b>	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

## ELECTRICAL FEATURES

<b>Lamp holder:</b>	Bi-pin G5
<b>Ballast:</b>	Electronic
<b>Rated voltage:</b>	230 V AC
<b>Rated frequency:</b>	50/60 Hz
<b>Connection:</b>	Direct to connectors fitted to electronic board L, N, Pe section 0.5 mm <sup>2</sup> terminal board with jumpers for input/output
<b>Emergency unit:</b>	Batteries Ni/Cd 2.5 Ah - 6,5 V The LED is used to monitor battery function: the green LED indicates that the lamp is charged and red indicates a faulty battery
<b>Wiring:</b>	Silicone rubber cables with glass braid protection against high temperatures

## ACCESSORIES AVAILABLE / SPECIAL REQUESTS

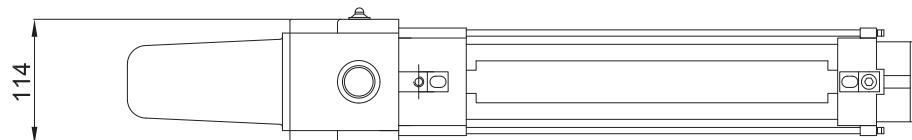

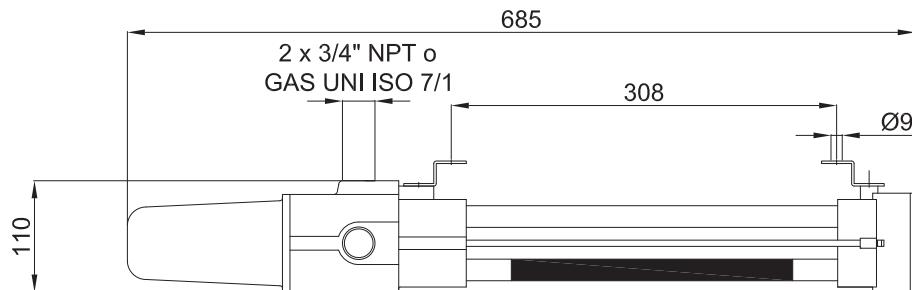

- 2 pin Ø16 fluorescent tubes model T5
- Installation mounting brackets
- Cable gland: FGAB2NBK for armoured cable or FB2NBK for non-armoured cable
- Warning signs to be requested during ordering
- Rated voltage: 120 V (code EVF-18ENX/**120**)
- GAS UNI ISO 7/1 thread

# ETH20MDLOUD/ series Loudspeakers

The international standards for safety in industrial environments establish the mandatory installation of suitable audible warning device that can be activated in case of alarm, emergency or danger for the safety of workers which operate at the modern manufacturing processes. The explosion-proof loudspeakers ETH20MDLOUD series have been designed for use in potentially explosive atmospheres in presence of explosive gases and dusts. They have a high degree of protection (IP66) to withstand the harsh off-shore and on-shore plants environmental conditions. They are suitable for connection to standard amplification system with output 100V, to alarm systems and for public address. The chamber of acoustic compression is separated from the outer atmosphere through a special filter of sintering. They are equipped with a transformer offering the possibility to adapt and select the sound level according to the real needs of the installation point.

# ETS series Rotating electromechanical siren

ETS electromechanical sirens are used in potentially explosive environments such as oil refineries and chemical and petrochemical plants or in areas where flammable dusts or substances are present. Given the high level of sound they emit, they are used outdoors in industrial environments where there is significant background noise. They are used for different applications such as fire alarms, safety alarms, for emergencies and to signal plant evacuation and intrusion.

- Zones 1, 2, 21, 22
- Emergency alarm button
- Suitable for the start of alarm bell or siren

## CSCPEA2 Emergency alarm button

CSCPEA2 emergency alarm button with its glass protective cover is the ideal solution for setting off audible/visual alarms in the event of danger. The device comes complete with a hammer for breaking the glass. The emergency button is kept pressed by the actual glass. The contacts change when the glass is broken and the button is released automatically.

#### **Product modifications and warranty**

Cortem Group reserves the right, at its sole discretion, to make any modifications (at any time and without notice) in order to improve the functionality and performance of its products or meet technical and manufacturing requirements. The measurements and drawings of the products and their parts are indicative only and not binding, because they can be modified without notice.

The latest updated information, data and certificates of our products are available on [www.cortemgroup.com](http://www.cortemgroup.com) web site.

All Cortem Group products are covered by warranty for a period of twelve months from the delivery date. For more information, refer to the "General Terms and Conditions of Sale" on [www.cortemgroup.com](http://www.cortemgroup.com) web site.

#### **Copyright**

In accordance with copyright laws, the Italian Civil Code and other regulations in effect in the markets where the Cortem Group operates, all the information, images, photographs, drawings, tables and anything else contained in the Cortem Group's illustrative/promotional material are the exclusive property of the Cortem Group, which has all the moral rights to the aforesaid material as well as the right to use it for commercial and economic purposes. It is therefore forbidden to reproduce all or part of the Cortem Group's illustrative/promotional material in any way, unless otherwise authorized by the Cortem Group in writing. Any violation of the above is against the law.
