

RMF SYSTEMS

PURE POWER

AIR CONDITIONER DESICCANT BREATHER

Benefits RMF 'Air conditioner'

- ▶ Reducing water contamination level prolongs the life of the additive package and reduces oxidation of the oil and bearing surfaces.
- ▶ Eliminates rusting due to condensation.
- ▶ Reduces machine downtime.
- ▶ Extends the machine's useful life.
- ▶ Reduces cost of ownership.

Air conditioners

CONDENSATION IN RESERVOIRS

HYDRAULIC AND LUBRICATING OILS MUST BE KEPT FREE FROM CONTAMINATION AND WATER. MOST FLUID RESERVOIRS MUST BE ABLE TO BREATHE, THUS ALLOWING WATER VAPOUR AND SOLID CONTAMINANTS TO ENTER. TEMPERATURE FLUCTUATIONS IN THE RESERVOIR WILL CAUSE THIS WATER VAPOUR TO CONDENSE WHICH WILL NOT ONLY CAUSE OXIDATION OF THE OIL, BUT CAN ALSO LEAD TO CONSIDERABLE MECHANICAL DAMAGE.

FILTRATION AND DRYING A SINGLE PROCESS

Standard air breathers remove some of the solid particles but allow water vapour in the air to pass freely. The RMF 'Air conditioner' deals effectively with both so reservoirs can breath clean, dry air. The air is first dried by passage through a column packed with ZR gel granules. The dried air is then passed through a pleated synthetic fibre filter element (replaceable spin-on type) where solid particles are removed,

so that the air reaching the reservoir is both clean and dry.

MONITORING

The uptake of moisture can be observed by the change in colour of the indicator granules in the ZR gel. They turn from ruby-red (active) to light orange (replace). The ZR gel granules are completely replaceable, non toxic and non carcinogenic. An optional contamination indicator shows when the air filter is in need of replacement.

ACTIVE COAL

RMF 'Air conditioners' can be fitted with a combination of ZR gel and active coal, the active coal will eliminate oil vapour and the smell, it will also prevent the ZR gel from being contaminated with this oil damp.

ACTIVE

REPLACE

ATMOSPHERICALLY CLOSED

The RMF range also offers some 'Air conditioners' for gearbox applications which have spring loaded (0.01 bar) check valves fitted in the base in opposing directions, opening only whilst inhaling or exhaling. This way there is no atmospheric contact with the air and the ZR gel under static conditions increasing the lifetime of the drying agent.

APPLICATIONS

RMF 'Air conditioners' can be used on hydraulic power units, lube and oil tanks, gearboxes, diesel fuel tanks and storage tanks for biodegradable fluids. Industries that are successfully applying 'Air conditioners' include: steel industry, aviation industry, forestry industry, pulp & paper industry, cement industry, petrochemical industry and mining industry.

Air Conditioners Accessoires

BENEFITS RMF OIL-DEMISTERS

- ▶ Reduces premature filter exchange
- ▶ Reduces fluid spills on machine surfaces
- ▶ Reduces environmental risks
- ▶ Reduces fluid waste
- ▶ Reduces safety issues with oil spills
- ▶ Reduces cost of ownership

WHERE CAN IT BE USED

RMF Oil-Demisters can be used on:

- ▶ Hydraulic power units
- ▶ Lube and oil tanks
- ▶ Gearboxes
- ▶ Pump vents
- ▶ Pulp Refiners

OIL-DEMISTERS

THE RMF SYSTEMS OIL-DEMISTERS ARE SPECIALLY DESIGNED TO PREVENT OIL MIST OR FLUID MIGRATION THROUGH AIR VENTS. THE RMF DEMISTER CONSISTS OF AN ALUMINIUM BODY WITH EXTERNAL COOLING RIBS AND CAN BE FITTED BELOW THE AIR CONDITIONER OR AIR FILTER.

Inside this aluminium body a coalescing post is positioned. When migrating oil vapour rises up this post the vapour coalesces into oil droplets which run down the outer diameter of the post and are guided back to tank through holes at the base of the post. In case of excessive splash the oil is contained in the post and runs down the slits in the post and is also returned to the reservoir.

OIL MIST

Air vents are used to compensate changes in air volume above the fluid level in gear boxes, hydraulic reservoirs, pump housings etc. High temperatures and thermal expansion cause migration of oil vapours through the air vent, blocking air filters and causing oil spills on machine surfaces. These fluid spills cause both an environmental and safety issue, they are also the cause of shortened air filter life and avoidable fluid consumption. In case of dynamic, volatile gearbox systems not only Oil Mist can migrate through air vents, but fluid splash can cause extreme fluid migration.

MOUNTING PLATES

RMF offers a range of Mounting or Adaptor Plates that can be fitted to hydraulic reservoirs, the mounting plates all have the standard DIN-24557/2 pattern. Mounting plates range from simple fitting of air conditioner only, mounting plate with additional port for vacuum indicator (Filter Minder), to mounting plates with additional porting, connection for suction and

return off Off-line filters.

The mounting plates allow for simple and quick air conditioner and off line filter installation without the need for welding/ drilling etc. The sealing on the tank lid is achieved by an 'O' ring which is part of delivery. The mounting plates can be used with all RMF Systems Air Conditioners.

FILTER MINDER

To monitor the state of the air filter, RMF Systems offers a Filter Minder (vacuum switch).

The filter minder is a combination graduated indicator and switch (N/O), a yellow indicator moves up in the window and locks at the highest air filter restriction. When it reaches the red zone, or highest recommended restriction, it closes a contact and can send a signal to the filter warning light. The locked position at highest restriction must be reset manually. The filter minder can be fitted to a variety of the RMF Mounting or Adaptor Plates.

Air conditioners Specifications

LIGHT VERSION SERIES ACL..R / ACM..R			
TYPE	ACL93R (C)	ACL96R (C), (V)*	ACM61R
Total weight	0.9 kg	1.1 kg	0.4 kg

Filter Minder Specifications

The graduated indicator monitors the airfilter. The position indicator progressively fills the window as the air filter restriction increases, looking at the highest restriction.

The airfilter should be changed when the position indicator reaches the red zone.
